

## LAB 4 – LFCD

Starting from the BNF description of the minilanguage syntax, construct the context free grammar (cfg) for parsing.

$$G = (N, \Sigma, P, S)$$

$N = \{ \text{program; libList; librarie; nmsp; decList; declare; type; stmtList; stmt; simpleStmt; assignment; expression; term; factor; iostmt; structCtmt; ifStmt; whileStmt; forStmt; condition; RELATION; complexStmt} \}$  -nonterminals

$\Sigma = \{ \text{int; float; double; char; string; bool; break; struct; do; if; else; while; for; true; false; void; main; cin; cout; +; -; *; /; =; <; >; <=; >=; <<; >>; ==; (; ); {; }; :: space; main; return; 0; #; include; iostream; using; namespace; std; IDENTIFIER} \}$  -terminals

$P = \{ \text{program} \rightarrow \text{libList nmsp int main ( ) \{ decList stmtList return 0; \}} \}$

$\text{libList} \rightarrow \text{librarie} \mid \text{librarie libList}$

$\text{librarie} \rightarrow \# \text{include} < \text{iostream} >$

$\text{nmsp} \rightarrow \text{using namespace std ;}$

$\text{decList} \rightarrow \text{declare} \mid \text{declare ; decList}$

$\text{declare} \rightarrow \text{type IDENTIFIER ;}$

$\text{type} \rightarrow \text{int} \mid \text{float} \mid \text{double} \mid \text{char} \mid \text{string} \mid \text{struct} \mid \text{bool}$

$\text{stmtList} \rightarrow \text{stmt} \mid \text{stmt ; stmtList}$

$\text{stmt} \rightarrow \text{simpleStmt} \mid \text{structStmt} \mid \text{complexStmt}$

$\text{simpleStmt} \rightarrow \text{assignment} \mid \text{iostmt}$

$\text{assignment} \rightarrow \text{IDENTIFIER} \rightarrow \text{expression ;}$

$\text{expression} \rightarrow \text{expression} + \text{term} \mid \text{expression} - \text{term} \mid \text{term}$
